

POWERFUL SOLUTIONS FOR DATA MANAGEMENT AND REPORTING

gINT LOGS

# gINT LOGS™

The world's best basic boring log program!  
 High-end logs, low-end price --

just UK £539

For over 20 years, gINT Software has been the innovative industry leader with its cutting-edge software for geotechnical and geoenvironmental professionals. Our cornerstone product, gINT Professional, is built on a well-engineered database powerhouse that generates logs and a whole lot more, in use by over 6,000 licensees in 53 countries worldwide.

Now from the makers of gINT Professional comes a new “basic” log-generation package in a very affordable price range, specifically engineered for those who have asked for “just the logs, please.” With gINT Logs, you’ll get gINT Software’s high-caliber engineering supporting what we know is the best basic log generation package available.

## gINT Logs brings you the best of all basic logging programs, and more:

- Customizable/user-definable log forms
- User-definable calculations and expressions
- Data can be reported in multiple formats, all user-customizable
- Can print multiple boreholes with one command
- Software can be installed on a network
- No limit to borehole depth
- Each project stored in a separate file (Microsoft ACCESS® format, though ACCESS is not required)
- Ability to import bitmaps and other graphic formats including site maps and company logos
- English and metric units capability
- Comprehensive editing features including spell check, font formats (bold, italic, superscript, etc.), find & replace functions
- Windows-compatible printers, using any size paper, any colors
- Free report forms available via Web
- Free updates available regularly via Web
- Very user-friendly
- 20 years of experience

## Database management system that is fully user-customizable:

If your data is not stored in a flexible, customizable database, you'll be stuck with a rigid data format that someone else designed. You're gambling: It might work for your data—but then again, it might not.

## All data entry can be done within one window (a standard grid) rather than in multiple windows accessed via fields on a template:

Otherwise you will spend a lot of time opening and closing various windows for data entry purposes, increasing the amount of time it takes to get the work done.

## An extensive symbol library (gINT has approximately 1,000 symbols) with ability to easily create your own:

A large symbol library, plus the ability to create your own symbols, gives you freedom to express your data exactly the way you like it.

## Ability to specify required fields, default values and descriptions for data entry in each field:

This dramatically expedites data entry and ensures consistent input. Descriptions for data entry educate the user, fielding entry-level questions automatically, meaning fewer interruptions and more accurate data entry.

## Ability to create lookup tables to speed up and standardize data entry:

This saves you a massive amount of data entry time AND helps you standardize data entry. Pulling an item off a drop-down list (customizable by you) makes data entry a breeze.

## A robust upgrade path:

As your business grows, you can easily “trade up” to more sophisticated gINT programs such as gINT logWriter+ and gINT Professional for additional report formats (fence diagrams, histograms, etc.) and robust features within logs, lab testing, and “smart forms.”

## Try the Free Demo

You can download a demo version of the software from [http://www.gintsoftware.com/products\\_demos.html](http://www.gintsoftware.com/products_demos.html). Use gINT Logs free for a limited time at your leisure and even output your work using our fully functional trial version software. Perfect for first-time gINT shoppers, the trial version is a quick way to start gINTing. Or if you prefer not to download the software from our Web site, you may request a Trial Version on CD-ROM.
